KOHLER PVD
PVD LAYER
1 CHROME LAYER
2 NICKEL LAYERS

Physical Vapor Deposition (PVD) process provides KOHLER Faucets a rich luster that is highly resistant to scratches, tarnish and corrosion.

With a thickness of 0.5–1.0 microns, the PVD layer has the right thickness to ensure durability and avoid flaking over time.

The PVD process is employed to create all KOHLER vibrant finishes, including: BN, SN, AF, PB, PGD, 2MB, BV, RGD, 3PS, 3TR, VS, and TT.

The PVD process is an eco-friendly process that does not generate any chemical waste.

KOHLER PVD finishes enjoy a Lifetime Limited Warranty.

The background of the slide is a composite image. On the left, there is a close-up of a modern shower fixture, including a vertical chrome bar and a digital control panel with a screen showing '100°' and various icons. On the right, a window is covered in raindrops, looking out onto a dense evergreen forest. The text is overlaid on this background.

WE OFFER EVERYTHING
you need.

WE ARE YOUR *first*,
BEST DESTINATION.

Your values ARE OUR VALUES.
